

---

**ITS64704 SOFTWARE TESTING**

**GROUP ASSIGNMENT**  
**(Software Test Plan and Execution Report)**

**HAND IN DATE: 22 May 2026**

---

**Instructions to students:**

- The group assignment should be attempted in group of 3-4 members.
- Complete this cover sheet and attach it to your submission – this should be your first page.

| Student declaration:                                                                                                                                                                                                                                |            |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <i>I declare that:</i> <ul style="list-style-type: none"><li>▪ <i>I understand what is meant by plagiarism.</i></li><li>▪ <i>The implication of plagiarism and usage of AI generative tool have been explained to us by our lecturer.</i></li></ul> |            |
| <i>This project is all our work and I have acknowledged any use of the published or unpublished works of other people.</i>                                                                                                                          |            |
| NAME                                                                                                                                                                                                                                                |            |
| Name                                                                                                                                                                                                                                                | Student ID |
|                                                                                                                                                                                                                                                     |            |
|                                                                                                                                                                                                                                                     |            |
|                                                                                                                                                                                                                                                     |            |
|                                                                                                                                                                                                                                                     |            |

*Avoid copy and paste job in your report and it is considered as plagiarism. Plagiarism in all forms is forbidden. Students who submit plagiarised document will deserve 0 marks.*

## 1.0 Objective/Learning Outcomes:

### Module Learning Outcome:

MLO2 - *Create and construct software testing strategies and test cases, by applying modern software testing procedures following appropriate procedures with the use of software testing tools.*

## 2.0 Information and Submission Instructions:

- Total marks: 100
- Weightage: 30%
- The submission should include the following parts in one PDF file:
  - Part 1: TU's template cover page
  - Part 2: Answers to the questions
- Instructions for Answers/Codes:
  - Ensure that explanations provided are directly related to the problem given in the document
  - Include detail explanations whenever necessary.
- Adherence to Instructions:
  - Follow all instructions given carefully to avoid any mark deductions.
  - Double-check your submission to ensure that all required parts are included and formatted correctly according to the provided instructions.
- Further guideline
  - The submission should only be done by the group leader.
  - As per the School of Computer Science policy, late submission within 12 hours after the actual submission time will have mark deduction of 50%. Any submission beyond 12 hours would not be accepted.
  - Plagiarism involves using others' work without credit.
  - Prioritize originality and integrity.
  - Avoid AI generative techniques to prevent plagiarism.
  - Follow guidelines strictly.
  - Understand consequences for violations.

### 3.0 Questions:

#### Project Overview

In this group project, your team will create a Software Test Plan (STP) and an Execution Report based on the assigned case study system. You will use the provided STP template and the Software Requirements Specification (SRS) developed in your group project. Your deliverable must demonstrate a comprehensive testing strategy, evidence of test execution, and documented defect management.

#### Project Steps

1. Form Groups: Groups of 3 - 5 students. Nominate a Team Leader who coordinates submission and is the single point of contact for assessment queries.
2. Project Title & Members: Choose a project title for your test effort (e.g., 'ShopEase Online - System Test Plan v1.0'). List all group members' names and student IDs on the cover page of your STP document.
3. The Software Test Plan template provided must be used. All sections must be completed. Do not omit sections - write 'N/A with justification' if a section genuinely does not apply.
4. SRS Analysis:
  - Review the SRS for your assigned system. Use it to identify the features to be tested, the business rules that govern test design, and the non-functional requirements that drive performance and security tests.
5. Plan Development:
  - Define test scope (in/out), test strategy per level (unit → integration → system → UAT), risks and dependencies, entry/exit criteria, and the test environment. Reference your system's specific context.
6. Test Cases:
  - Create test cases derived from the SRS. Each test case must include: unique ID, title, preconditions, test steps, expected result, test data, and pass/fail criteria. Minimum quantities are specified per question.
7. Test Schedule and Management:
  - Develop a testing timeline with key milestones. Assign individual responsibilities for test design, execution, review, and defect logging using a RACI table.

8. Approval and Document History:

- Maintain a document revision history (minimum 3 entries). Simulate a review and approval sign-off chain, identifying who would approve the STP in a real-world scenario.

9. Execution Report:

- Execute the designed test cases and record results in a test execution log. Produce a test execution summary report including pass rates, defect severity distribution, and retest outcomes.
- 

**- END OF ASSIGNMENT QUESTIONS -**

| Criteria                                         | Excellent                                                             | Good                                                | Fair                                            | Needs Improvement                                 | Poor                                                   |
|--------------------------------------------------|-----------------------------------------------------------------------|-----------------------------------------------------|-------------------------------------------------|---------------------------------------------------|--------------------------------------------------------|
| <b>Test Plan Structure and Completeness (10)</b> | All sections are thoroughly completed and well-organized.             | Most sections are complete with minor omissions.    | Some sections are incomplete or lack detail.    | Many sections are missing, disorganized.          | Significant portions are missing.                      |
| <b>Project Overview and Description (5)</b>      | Clear and detailed description of the project, objectives, and scope. | Adequate description with minor detail omissions.   | Basic description provided but lacks depth.     | Vague or incomplete overview.                     | Project overview is not provided.                      |
| <b>Scope and Test Strategy (10)</b>              | Clearly defined with detailed explanations for all testing levels.    | Mostly clear but needs more detail in some areas.   | Basic scope and strategy with minimal depth.    | Strategy is vague or incomplete.                  | Missing or unclear strategy.                           |
| <b>Testing Stakeholder Communication (10)</b>    | Comprehensive communication plan, covering all stakeholders.          | Good plan with some minor omissions.                | Basic communication plan, lacking some details. | Plan is incomplete or not well-defined.           | No communication plan provided.                        |
| <b>Test Case Quality (30)</b>                    | Detailed, realistic test cases covering all requirements.             | Covers most requirements with some details missing. | Basic test cases but lacking sufficient detail. | Test cases are minimal and cover limited aspects. | Few test cases present and not linked to requirements. |
| <b>Verification and Validation Approach (10)</b> | Clear and detailed verification and validation methods.               | Good methods but lacking depth in some criteria.    | Basic approach with minimal detail.             | Poorly defined approach, lacking detail.          | No verification and validation approach.               |
| <b>Test Schedule and Management (5)</b>          | Well-structured schedule with milestones and resource allocation.     | Mostly complete with minor gaps.                    | Basic schedule with limited milestone detail.   | Poorly structured or missing key milestones.      | Schedule is missing or not structured.                 |
| <b>Approval Authority and Roles (5)</b>          | Clearly defined roles, responsibilities, and approval process.        | Adequate roles with some omissions.                 | Basic roles defined but lacking clarity.        | Roles are vague or not well-defined.              | No roles or approval process defined.                  |

|                                                        |                                                                |                                             |                                             |                                         |                                    |
|--------------------------------------------------------|----------------------------------------------------------------|---------------------------------------------|---------------------------------------------|-----------------------------------------|------------------------------------|
| <b>Execution Report<br/>(Test Results)<br/>(10)</b>    | Detailed and clear report with results accurately summarized.  | Good report with minor gaps.                | Basic report with some details missing.     | Report is incomplete or lacks clarity.  | No execution report provided.      |
| <b>Document Formatting and Overall Quality<br/>(5)</b> | Well-formatted document, consistent style, visually appealing. | Good formatting with minor inconsistencies. | Basic formatting with some inconsistencies. | Poor formatting and inconsistent style. | Poorly formatted, lacks structure. |
